Sequence 64, Application US/08961527

Patent No. 6420135

Patent No. 6420135

GENERAL INFORMATION:
APPLICANT: Charles Kunsch
TITLE OF INVENTION: Streptococcus pneumoniae Polynucleotides and Sequences NUMBER OF SEQUENCES: 391

CORRESPONDENCE ADDRESS:
ADDRESSEE: Human Genome Sciences, Inc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1221 GGCCTGGTAGTAAACCAGGCCCTGGCTCTTTACCAGCAGTCATCTTCTTGTTGTTGGGG 1280
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        12 GGTATGGACGTATACGAGTTCTTGGTCAATTTCCAGGACACAGATGATTCGGTCCAAGAA 71

Patent No. 5912156

GENERAL INFORMATION:
APPLICANT: OHATA, SHOZO
APPLICANT: BURNELL, JAMES N

TITLE OF INVENTION: ORTHOPHOSPHATE DIKINASE ACTIVITY, DNA ENCODING THE SAME
TITLE OF INVENTION: ORTHOPHOSPHATE DIKINASE ACTIVITY, DNA ENCODING THE SAME
TITLE OF INVENTION: AND RECOMBINANT VECTOR AND TRANSFORMED PLANTS CONTAINING
TITLE OF INVENTION: THE DNA
NUMBER OF SEQUENCES: 37

CORRESPONDENCE ADDRESS:
ADDRESSEE BIRCH, STEWART, KOLASCH AND BIRCH, LLP
STREET: 8110 GATE HOUSE ROAD SUITE SOU EAST

Sequence 1, Application US/07767135; Patent No. 5234811; Batch No. 5234811; GENERAL INFORMATION:
APPLICANT: Beutler, Ernest
APPLICANT: Sorge, Joseph A
TITLE OF INVENTION: An Assay for a New Gaucher Disease; ITLE OF INVENTION: Mutation
NUMBER OF SEQUENCES: 19
CORRESPONDENCE ADDRESS:
ADDRESSEE: The Scripps Research Institute, Office of STREET: 3366 No. 5234811th Torrey Pines Court, Suite 240
CITY: La Jolla
                                                                                                                                                                                                                                                                                                                     COUNTRY: USA

Sequence 22, Application US/07869933
Patent No. 5770396
GENERAL INFORMATION:
APPLICANT: KINET,
APPLICANT: ATLE OF INVENTION: ISOLATION, CHARACTERIZATION, AND USE OF
TITLE OF INVENTION: THE HUMAN B SUBUNIT OF THE HIGH AFFINITY RECEPTOR FOR
TITLE OF INVENTION: IMMUNOGLOBULIN 98 TACAATTTGGGTGGATTGGCAACAACTTCCTGTGACTAACAGGTCCATAGTTTTTCACG 157 503 TAAAAGTTGGACTCATTGGTCCAGATCTTCCTTTTACTAACAATTACGGTGTTTGGGAAG 562 GENES OF CAROTENOID BIOSYNTHESIS AND METABOLISM AND A SYSTEM FOR SCREENING SUCH GENES 0; Gaps / Match 12.1%; Score 25; DB 1; Length 1860; Local Similarity 58.9%; Pred No. 30;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 1, Al

Sequence 10, Application US/08761248B

Patent No. 595873.

GENERAL INFORMATION:

APPLICANT: ROWLEY, DAVID R.

TITLE OF INVENTION: PACTOR NUCLEOTIDE AND AMINO ACID SEQUENCES
NUMBER OF SEQUENCES: 15

CORRESPONDENCE ADDRESS:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   JOURNAL:
VOLUME: 1
```

```
NAME/KEY: Complete amino acid sequence of human SLPI
NAME/KEY: (antileukoprotease).
PUBLICATION INFORMATION:
AUTHORS: Heinzel, R., Appelhans, H., Gassen, G.,
AUTHORS: Seemuller, U., Machleidt, W., Fritz, H., and Steffens, G.
TITLE: Molecular cloning and expression of cDNA for
TITLE: human antileukoprotease from cervix uterus
JOHENAL: European Journal of Biochemistry
